## *Chemical Management Programs*

Let KB Page help manage your facility's metalworking fluids, coolants and lubricants... and much more.

### *Your Goals... Your Program...*

We will work with you to define your goals and then achieve them through the implementation of a program designed specifically for your facility and industry.

We will focus on the collection of hard data, develop a baseline of existing conditions, and understand the fundamentals that drive your company to operate profitably, including your manufacturing costs and cost of quality.

### *Your Success... Your Savings...*

We will work with you to achieve a year-over-year total cost reduction through cost reduction projects, usage reductions, consigned inventory with replenishment, negotiated price savings, waste minimization and other productivity improvements.

### *Our Strength... Your Stability...*

We believe the strength of our programs is best summarized by the strengths and experiences of our *On-Site Chemical Program Manager* and his ability to work within your facility. The ability to work independently and critically while building support and consensus for strategic projects and initiatives is a proven skill set for our Program Manager.

### *Why it works...*

We will present facts and recommendations using the Advantages of our Chemical Management Program: Lean Enterprise practices, Six Sigma methodology, Continual Improvement processes, Business Training & Experience, Chemical Engineering, and Performance Management.

### *How we do it...*

Your facility and your goals are unique. Let KB Page help you design your own Chemical Management Program. Here are just some of the techniques and services available:

- Central and specific Fluid System Management of coolants, straight oils, and other process fluids
- All Fluids Analysis and Reporting with go-forward recommendations
- Process Improvement projects
- On-site laboratory set up and/or vendor-managed sample analysis
- Quality Compliance for Manufacturing, Corrosion Control, and Heat Treating
- Lubrication scheduling, testing and evaluation
- Chip and Swarf Removal programs
- Additive applications
- Waste and Scrap Reductions
- Inventory Control
- EH&S Compliance and participation on Plant Safety Committee
- Personnel Training
- Corporate compliance and certification coordination
- Troubleshooting and Failure analysis
- Product Rationalization

### *What it does for you...*

While your program will be unique to your facility and industry, cost savings are at the core of every one of KB Page's Chemical Management Programs. Here are just some of the ways our value-added programs help you save:

- Increased equipment and tool life
- Decreased downtime and tooling changes
- Increased fluid life and productivity
- Decreased fluid consumption and change-outs
- Lowered maintenance costs and requirements
- Decreased issues with handling, health & safety, training and documentation
- Reduced disposal and environmental costs
- Consolidation of inventory and reduction of misapplication potential
- Reduced utility (energy, water) costs

*Please call us or visit our website to learn how we can help you achieve your goals.*
